EXAMINER'S AMENDMENT*Amend A/PRHP*

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- In page 1 of the specification, on line 3, after "U.S. Application No."
- insert --10/073,814[✓], now is U.S. Patent number 6,580,842[✓]--; and on line 5, after "U.S. Application No." insert --10/073,754[✓], now is U.S. Patent number 6,560,387[✓]--.
- In the "ABSTRACT OF THE INVENTION", rewrite as following:

ABSTRACT OF THE INVENTION [✓]

--An integrated isolator array is provided having a plurality of waveguides fabricated in a planar optical substrate, each waveguide having input and output sections. An isolator subassembly is received within a transverse trench formed in the substrate between the input and output sections such that it intersects the optical paths of the waveguides. The isolator subassembly, which may consist of layers of Faraday rotator material sandwiched between layers of birefringent crystal material, permits the forward passage of light from the input sections to the output sections of the waveguides while preventing the backward passage of light from the output to the input sections. Each waveguide input section is

preferably adapted with a mode-expanding input taper to collimate light propagating through the waveguide. Similarly, each output section is preferably adapted with a mode-reducing output taper to reduce the mode size of forward- traveling light to match that of an output fiber, as well as to collimate light traveling backward within the output section--.

REASON FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: the claims are allowable over prior art of record, because none of the references in alone or in combination discloses:

+++ An integrated optical isolator device, comprising:

- a planar optical substrate;
- a first waveguide formed in said optical substrate and having an input section and an output section; and
- an isolator element affixed to said optical substrate and positioned in an optical path of said first waveguide between said input section and said output section, said isolator element being configured to allow the passage of forwardly traveling light from said input section to said output section of said first waveguide while inhibiting the passage of backwardly traveling light from said output section to said input section, as discloses in claims 1, and 17.

The underline limitations is critically, since the **integrated optical Isolator device is improved**, it is significant reduce the insertion loss, and reduce the cost manufactured in large volumes using automated assembly techniques.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
